Innovative Adhesives for Medical Applications

Panacol Vitralit®, Structalit® and Cyanolit® Adhesives

Hönle UV-Curing Systems - bluepoint LED eco, LED Powerline, LED Spot 100

Adhesives
- Certified USP Class VI and/or ISO 10993
- 100% solvent free
- Fast curing with UVA and visible light
- Convenient handling
- Compatible with common sterilization processes

UV-Curing Systems
- High UV-intensity
- Curable with UV-LED only, to eliminate heat
- Easily adaptable to existing production lines
- Optimum quality, efficiency, and value
- LED failure detection for a save process
Adhesives for Medical Applications

Advanced Adhesive Technologies for Medical Applications Certified USP Class VI and/or ISO 10993

Panacol develops and produces cutting-edge adhesives for medical applications within a wide range of chemistries. This includes UVA and visible light curable adhesives, coating materials, potting compounds, instant-cure adhesives, and 2-part epoxies.

All products are formulated to meet the biocompatibility standards of USP Class VI and/or ISO 10993 standards.

Needle Bonding

- Vitralit® 7041, 7311 and UV 4050 are excellent choices for metal-plastic bonding
- Vitralit® 6108/6108 T achieve optimum adhesion properties on glass and metal
- Reliable bonded joints without material cracking
- High extraction force after autoclave sterilization ETO- and gamma radiation treatment

Typical Applications

- Joining stainless steel cannulae to transparent or translucent hubs and syringes
- Bonding/sealing of transparent polycarbonate or acrylic housing parts in blood oxygenators
- Bonding/sealing stainless steel cannulae into flexible PVC infusion lines
- Bonding soft PVC to rigid PVC in anaesthesia masks
- Bonding of subassemblies in blood pressure transducers, stopcocks, fittings, adapters and arterial filters
- Coating of PCBs in hearing aids

Complete Solutions for Your Assembly Process

Dr. Hönle Group offers compatible system technology: Panacol’s high performance adhesives and complementing UV- and LED equipment manufactured by Dr. Hönle AG ensure rapid bonding at an optimum quality.

Hönle system solutions provide excellent technical competence and process reliability.

Key Benefits of Panacol High-Tech-Medical-Adhesives

- Certified USP Class VI and/or ISO 10993
- 100% solvent free
- High productivity due to fast curing within seconds
- Compatible with common sterilization processes
- Excellent adhesion to glass, plastics and metals
- Bonding of difficult substrates possible
- Flexible usage for manual and automated production process
- Wide viscosity range from capillary flow to gap filling
- Optimum process control with blue and orange fluorescent adhesives

Customized Solutions for Unique Applications

Panacol provides innovative solutions for your needs: All adhesives can be individually tailored and tuned to your special requirements. For further information please contact us at info@panacol.de.

Perfect Curing of Adhesives and Sealing Compounds with High Performance UV Equipment by Hönle

Dr. Hönle AG is one of the world’s leading suppliers of industrial UV technology. Innovative Hönle UV-systems have been applied worldwide - as gas-discharge lamps and also as LED-versions.

Hönle and Panacol attach great importance to joint research and development. They have combined their knowledge and extensive experience which has led to comprehensive high-tech solutions in medical engineering.

Hönle UV-Technology for Medical Applications

bluepoint LED eco
bluepoint LED eco has been developed for all applications requiring a most intensive UV irradiation. Thanks to its high intensity and the capability to program complete process sequences, e.g. exposure series with different intensities and holding times, it is possible to realize very short cycle and machine throughput times, especially in fully automated production lines.

LED Powerline
LED Powerline is a high-performance array with all advantages of LED technology: LEDs have an extremely long lasting lifetime and do not require heating up or cooling phases.

LED Powerline is available in wavelengths of 365/385/395/405nm. This variety allows an exact adjustment of the wavelength to the respective application.

LED Spot 100
LED Spot 100 has been developed for all applications requiring a highly intensive UV irradiance over a large area, which can optionally be enlarged by connecting several LED Spots 100 without gaps. The arrangement of the LEDs as well as an electronic power control guarantees a homogenous irradiation.

The recognition of LED-malfunction and a comprehensive monitoring function provide very high process stability.

LED Spot 100 is applied for manufacturing hearing devices or for tube bonding.
